DETAILED ACTION

1. This is an Examiner's statement of reasons for allowance. The closest prior art Feigen et al U.S. Pat. No. 5,699,513 discloses a connection request messages that sent from source hosts in an outside network are intercepted in the security host and prevented from being transmitted on the inside network.

JP410079732A Saito Tetsuo discloses a transfer transmission information while securely protecting security by individually obtaining message authentication code information on a transmission side and a reception side.

IBM Technical Disclosure Bulletin discloses a portable method of authentication the user identification of the message senders of a public message queue.

However, neither Feigen nor Saito and IBM Technical Disclosure Bulletin singularly or in combination fails to anticipate or render the recited feature:

As per claim 31" if the first confidential information by said information is verified, supplying the secured message, by the information processing system, to the remote communication device corresponding to the identification of the destination of said message, generating, by said information processing system, a second confidential information for single use, supplying to said user, by said information processing system, of the second confidential information, on a third transmission support, receiving, by the information processing system, of the second confidential information, on a fourth transmission support different from the third transmission support, and verifying the second confidential information by said information processing system.
